True origami is where the models are made from a single piece of square paper. In modular origami, the model is made from a number of smaller modules which are usually identical and made from one piece of paper. The models are often patterned after 3D geometric shapes called polyhedra. This piece of modular origami is called the Japanese Brocade.

Construction involves inserting the tabs of one module into the pocket of another. If identical modules are used, the resulting flat or 3D shape contains repeating pattern and symmetry, and can hence be described as 'geometric' in form. This is the kind of modular origami that I most enjoy folding.

Modular origami is a technique that can be used to build some pretty interesting and impressive models of mathematical objects. In modular origami, you combine multiple units folded from single pieces of paper into more complicated forms. The Sonobe unit is a simple example unit from modular origami that is both easy to fold and compatible for constructing a large variety of models.
