increasing, and is estimated to reach 9 billion by 2040.

## **Intro to Population Growth - Lyons Township High School**

The global population growth rate peaked long ago. The chart shows that global population growth reached a peak in 1962 and 1963 with an annual growth rate of 2.2%; but since then, world population growth has halved. For the last half-century we have lived in a world in which the population growth rate has been declining.

## **World Population Growth - Our World in Data**

If a population is in exponential population growth, then the population is increasing under ideal conditions (abundant food and freedom to reproduce at physiological capacity). In the graph below, explain why the line with the value of 1.0 shows a steeper slope that reaches exponential growth more quickly than does the line with the

## **Ch. 5 section 5.3 Human Population Growth Flashcards ...**

A consequence of exponential human population growth is a reduction in time that it takes to add a particular number of humans to the Earth. Figure 45.15 shows that 123 years were necessary to add 1 billion humans in 1930, but it only took 24 years to add two billion people between 1975 and 1999. As already discussed, our ability to increase our carrying capacity indefinitely may be limited.
