In the United States, power transmission is, variously, 230 kV to 500 kV, with less than 230 kV or more than 500 kV being local exceptions. For example, the Western System has two primary interchange voltages: 500 kV AC at 60 Hz, and ± 500 kV (1,000 kV net) DC from North to South (Columbia River to Southern California) and Northeast to ...

Transformers at the generating plant increase the voltage up to a transmission voltage (69 kV, 115 kV, 230 kV, 500 kV, 765 kV), so it can travel long distances over high-voltage transmission lines. G&Ts operate these lines, which carry the electric energy from the generating stations to the places where electricity is used.
