INTRODUCTION. In pediatric dentistry, premature loss of necrotic primary molars has been a matter of great concern over the years. 1-3 In modern pedodontic practice, pulpectomy of such teeth is regarded as a treatment of choice over extraction. 4,5 Success of a pulpectomy procedure mainly depends upon the biomechanical preparation of the root canal systems. 6 Although manual instrumentation ...

### Dental Assistant (DA) Knowledge, Skills and Abilities

The Hall Technique is a non-invasive treatment for decayed baby back teeth. Decay is sealed under preformed (stainless steel) crowns, avoiding injections and drilling. It is one of a number of biologically orientated strategies for managing dental decay. The technique has an evidence-base showing that it is acceptable to children, parents and dentists and it is preferred over standard filling ...

### Hall Technique - Wikipedia

As for rotary instrumentation techniques in primary molars, in vitro studies found equal cleaning capacity but reduction of instrumentation time by the rotary technique [56-60]. The use of the rotary technique reduced the time of instrumentation and obturation to 63 and 68 %, respectively, and also improved the quality of the root canal ...
