logic chapter 5 Flashcards and Study Sets | Quizlet

Categorical Statements In this chapter we will be looking at a special kind of statement called categorical. They are so called because sentences that express them can be interpreted as asserting a relation between two categories or classes of things. Some examples of sentences expressing categorical statements are: All mice are rodents.

Logic: A Brief Introduction Ronald L. Hall, Stetson University Chapter 6 - Categorical Arguments 6.1 Introduction Deductive arguments sometimes take a form called a syllogism. A syllogism is a deductive argument that is composed of three propositions. As an argument, of course, one of those propositions is used as the conclusion of

Chapter 6 - Categorical Arguments

A set of statements is logically consistent if they can all be true at the same time. A set of statements is logically inconsistent if they cannot all be true at the same time. It may also be helpful to think of logical consistency as a set of beliefs that do not contradict each other (regardless of whether they are true).

Chapter 5: Logical Consistency - Lucid Philosophy

Chapter 5: Categorical Propositions. A. Categorical Propositions. Categorical propositions are statements about classes of things. A class is a group of objects. There are two class terms in each categorical proposition, a subject class and a predicate class. The study of categorical propositions includes the logical structure of individual categorical propositions (how the subject and predicate classes relate to each other), as well as how
