As was the case for gaseous substances, the kinetic molecular theory may be used to explain the behavior of solids and liquids. In the following description, the term particle will be used to refer to an atom, molecule, or ion. Note that we will use the popular phrase "intermolecular attraction" to refer to attractive forces between the particles of a substance, regardless of whether these ...

dispersion forces rise with molecular weight, as the numbers of electrons increase, which in turn cause the polarizabilities to increase. Thus, the order of increasing intermolecular forces is $C_2H_6 < C_6H_{14} < C_{18}H_{38}$. As the London dispersion forces increase the tendency to be in a condensed phase increases. 7.
