Chemistry. From aluminum to xenon, we explain the properties and composition of the substances that make up all matter.

### Chemistry Study Guides - SparkNotes

Electrochemistry can take place between any two species that can gain and lose electrons. Often, these are two metals, like cadmium and lithium or aluminum and iron. Connect them with a wire or a salty, acidic solution that will transfer charge from one side to the other, and you have a battery.

### Electrochemistry: More Powerful than Thor! - Educator.com Blog

Pure, distilled water is a very poor conductor of electricity, but a high concentration of dissolved ions leads to high conductivity. That is why acids, bases, and salts that ionize to a high degree are referred to as strong electrolytes, while those that ionize only slightly are referred to as weak electrolytes.
