Malfunctioning power door lock actuator:  
The power door lock actuator is the part  
of the power door lock system that  
actually controls the locks. The actuator  
is a series of gears, with a set of rack  
and pinion gears at the end. When the  
actuator gets the signal from the power  
door lock switch, a small motor turns the  
gears.

## **lock actuator**

A door lock actuator is the component in electronic door locks that is responsible for locking and unlocking the vehicle's doors. When a button is pressed to lock or unlock a door, the door lock switch triggers the actuator. A small motor in the actuator then triggers a series of gears. The final gear is connected to a rack and pinion set of gears, which converts the rotational motion of the motor into the vertical motion necessary to lock or unlock the door.
