

## Functions Graphs Past Papers Unit 1 Outcome 2

As recognized, adventure as without difficulty as experience virtually lesson, amusement, as capably as conformity can be gotten by just checking out a books **functions graphs past papers unit 1 outcome 2** next it is not directly done, you could endure even more going on for this life, with reference to the world.

We pay for you this proper as capably as simple quirk to get those all. We pay for functions graphs past papers unit 1 outcome 2 and numerous books collections from fictions to scientific research in any way. along with them is this functions graphs past papers unit 1 outcome 2 that can be your partner.

The eReader Cafe has listings every day for free Kindle books and a few bargain books. Daily email subscriptions and social media profiles are also available if you don't want to check their site every day.

### Functions Graphs Past Papers Unit

Functions/Graphs Past Papers Unit 1 Outcome 2 Written Questions [SQA] 1.  $f(x) = 3x$  and  $g(x) = 3x - 6$ . (a) Find  $p(x)$  where  $p(x) = f(g(x))$ . 2 (b) If  $q(x) = 3x - 6$ , find  $p(q(x))$  in its simplest form. 3 [SQA] 2. PSfrag replacements  $0 < x < 6$  [SQA] 3. On a suitable set of real numbers, functions  $f$  and  $g$  are defined by  $f(x) = 1 - x + 2$  and  $g(x) = 1 - x$  ...

## Functions Graphs Past Papers Unit 1 Outcome 2

The Graph of the Sine Function and the Unit Circle Recall from Chapter 9 that if  $\theta$  is an angle in standard position with measure  $u$  and  $P(p, q)$  is a point on the unit circle, then  $(p, q) = (\cos u, \sin u)$  and  $A(u, q)$  is a point on the graph of  $y = 5 \sin x$ . Note that the x-coordinate of A on

**Skill 1: Evaluating Functions** Evaluating functions involves putting numbers into the function to get the result. Example: A function is given by  $f(x) = 3x+1$ , Find  $f(10)$  All this requires is to replace  $x$  with 10 and calculate the result.. When we input 10 into this function that would look like:.

$$f(\text{\textcolor{red}\{10\}}) = 3 \times \text{\textcolor{red}\{10\}} + 1 = 31$$

In this section, we will interpret and create graphs of sine and cosine functions. Graphing Sine and Cosine Functions. Recall that the sine and cosine functions relate real number values to the  $x$ - and  $y$ -coordinates of a point on the unit circle. ... Table 1 lists some of the values for the sine function on a unit circle.  $x$   $x: 0$   $0$ :

This chapter covers all the graphs and functions you need to know about in grade 10. This includes looking at relationships between variables, the parabola, hyperbola and the exponential graph and the effect of “ $a$ ” and “ $q$ ” on the graph as well as discussions on the domain and range of each graph, asymptotes, axes of symmetry, turning points and  $x$  and  $y$  intercepts.

The radian is a natural unit for measuring angles. We use radian measure in calculus because it makes the derivatives of trigonometric functions simple. You should try to get used to thinking in radians rather than degrees. To measure an angle in radians, construct a unit circle (radius 1) with centre at the vertex of the angle. The

Example: Plotting Quadratics Plot the following quadratic equation:  $y = x^2 - x - 5$  [2 marks] First draw a table of coordinates from  $x = -2$  to  $x = 3$ , then use the values to plot the graph between these values of  $x$ . Step 1: Draw a table for the values of  $x$  between  $-2$  and  $3$ . Step 2: Substitute our values of  $x$  into the equation to get the corresponding  $y$  values. For example, when  $x = -2$ , we get
