Breath malodour is a condition that has health and social implications. The origin of breath malodour problems are related to both systemic and oral conditions.

ResearchGate | Find and share research

The first step in assessment is an objective measurement of breath odour to determine whether malodour is actually present, because most individuals are poor judges of their own breath odour (Eli et al , 2001). Three objective methods of breath malodour measurement are available viz, gas chromatography, halimetry (sulphide monitoring) and ...

Fundamentals/Physiology of malodor detection □ Breath of a person contains up to 150 different molecules. Perception of the molecules depends on the following factors: 1. Olfactory response (odor of molecule) 2. Threshold concentration (conc at which it can be detected) 3.

Oral HALITOSIS

Similarly, morning bad breath is caused because the amount of saliva decreases in the mouth when we sleep, thus leading to dry mouth. This odour also disappears after brushing and having breakfast. Fasting also causes bad breath which goes away after eating and maintaining oral hygiene. So, a persistent Malodour does reflect some pathology.
