7. Write a conjecture about congruent triangles and area. Possible answer: Congruent triangles have equal area. Pedro already knows some things about the area of the midsegment triangle of a right triangle. But he thinks he can expand his theorem. Before he can get to that, however, he has to show another property of triangles and area. 8.

Reteach 7-5 Triangles (continued) LESSON You can also classify triangles by the lengths of their sides. A scalene triangle has no congruent sides. An isosceles triangle has at least 2 congruent sides. An equilateral triangle has 3 congruent sides. The sum of the lengths of the sides of the triangle below is 18.6 cm.

Holt McDougal Geometry Reteach Classifying Triangles You can classify triangles by their angle measures. An equiangular triangle, for example, is a triangle with three congruent angles. Examples of three other triangle classifications are shown in the table. You can use angle measures to classify ΔJML at right.
