Contaminant transport and fate in ground water. A key objective of the USGS Toxic Substances Hydrology (Toxics) Program is to understand the physical, chemical, and biological processes that control contaminant transport in ground water. Many Toxics Program scientists participate in multidisciplinary investigations of the reactive and non-reactive transport of contaminants in ground water.

This book deals with flow and contaminant transport processes, field investigation methods, flow and transport modelling, and groundwater remediation. It consists of 14 chapters: introduction to groundwater; groundwater hydrology; groundwater flow and well mechanics; sources and types of groundwater contamination; data collection methods; contaminant transport mechanisms; sorption and other...

Ground water contamination: transport and remediation.

Many groundwater contamination problems are multi-component systems containing such chemical components as water, air, and various organic compounds. Multiple phases involved in such systems include water, gas, and nonaqueous phase liquids (NAPL).

Groundwater Contamination - an overview | ScienceDirect Topics

Unfortunately, groundwater is susceptible to pollutants. Groundwater contamination occurs when man-made products such as gasoline, oil, road salts and chemicals get into the groundwater and cause it to become unsafe and unfit for human use. Materials from the land's surface can move through the soil and end up in the groundwater.

CONTAMINATION Contamination of ground water can result in poor drinking water quality, loss of water supply, degraded surface water systems, high cleanup costs, high costs for alternative water supplies, and/or potential health problems. The consequences of contaminated ground water or degraded surface water are often serious.

Dangerous illnesses like hepatitis and cholera are often linked to ground water pollution and poor water sanitation. Often this type of contamination goes unnoticed for long periods of time while it silently affects large communities. Often times people only notice the effects of contaminated groundwater when birth defects begin to be reported.
