air resistance. 2. Cause Effect Gravity acts on a falling object. The object accelerates toward Earth. Air resistance equals gravity and acts in the opposite direction. The falling object reaches terminal velocity. 3. final

CHAPTER SECTION 3 Momentum - LAB RATKOS

SECTION 2 Name Class Date Gravity continued AIR RESISTANCE AND TERMINAL VELOCITY You may have seen objects falling through the air at different rates. For example, a piece of paper falls more slowly than a ball. This may seem to contradict the state-ment that all objects have the same free-fall acceleration.

CHAPTER SECTION 2 Gravity - Steinbach Science

The two objects fell at exactly the same rate, as indicated by the horizontal alignment of the multiple images. The amount of time that passed between the first and second images is equal to the amount of time that passed between the fifth and sixth images.
