(PDF) M1 and M2 polarization of macrophages: a mini-review

In this review, I summarized current information on macrophage polarization, function, and signaling. Macrophages play important roles in host defense against microbial infections and tumors....

M1 and M2 polarization of macrophages: a mini-review

In this mini-review, we briefly summarize the macrophage accumulation in several inflammatory and fibrotic kidney diseases, discussing the results mostly from studies in animal models and focusing on the macrophage polarization and its role in kidney disease progression.

Therefore, we developed and assessed a swine model of advanced atherosclerotic plaques with macrophage polarization. Methods: Mini-pigs were fed a 2% high-cholesterol diet for 7 weeks followed by withdrawal periods of 4 weeks. Endothelial denudation was performed using a balloon catheter on 32 coronary and femoral arteries of 8 mini-pigs.

This mini-review focuses on recent studies exploring clinical significance of M1/M2 TAM ratio in human cancer tissue and critically evaluates the technicalities and challenges in quantifying this parameter for routine clinical practice.

Evaluating the Polarization of Tumor-Associated ...

Macrophage polarization refers to how macrophages have been activated at a given point in space and time. Polarization is not fixed, as macrophages are sufficiently plastic to integrate multiple signals, such as those from microbes, damaged tissues, and the normal tissue environment.

Macrophage Polarization | Annual Review of Physiology

In contrast, M2 macrophages are characterized by their involvement in tissue remodeling, immune regulation, tumor promotion, and efficient phagocytosis. In this minireview, we discuss the stimulation, markers, cytokines, and signaling molecules involved in macrophage polarization. Keywords: Macrophages; Polarization; Tumor-associated macrophages

In this review, we begin by briefly describing the origin of macrophages and their different polarization states. The main body of the review will focus on the response of macrophages to microenvironmental cues, primarily those inherently presented by biomaterials but also consequent cues that occur due to biomaterial implantation.

Mini-review. Metabolic reprogramming of macrophages during infections and cancer ... These factors and pathways play pivotal roles not only in metabolic regulation but also in macrophage polarization. After activation, classically activated M1 macrophages and alternatively activated M2 macrophages display distinct patterns in glucose, lipid ...

Metabolic reprogramming of macrophages during infections ...

Macrophage Polarization. The continuum of macrophage polarization starts with the M0 polarized macrophage. One protein with key importance in macrophage polarization is represented by PU.1, which opens the chromatin conformation of macrophage-specific genes and further allow transcription factors to act in a cell-specific manner (3-6).

To evaluate the polarization of TAMs in murine GIST, we performed flow cytometry for M1 and M2 macrophage markers. TAMs expressed high amounts of the inflammatory markers CD11c and MHC class II (Fig. 1 F , top) but were distinct from the small population of CD11c hi MHCII hi conventional DCs contained among F4/80 – cells (Fig. 1 G) and had ...

2.3 Altered Pathways Reflect Macrophage Activation and Suggest Macrophage Polarization We next hypothesized that the establishment of different cytokine-driven microenvironments could further contribute to distinct expression patterns in macrophages, thus facilitating their polarization toward M1, M2, and mixed M1/M2 types.

Macrophage polarization is a process by which macrophages adopt different functional programs in response to the signals from their microenvironment. This ability is connected to their multiple roles in the organism: they are powerful effector cells of the innate immune system, but also important in removal of cellular debris, embryonic development and tissue repair.
