Choosing between Microcontroller and Microprocessor The selection between a microcontroller (MCU) and Microprocessor (MPU) depends and affects your project. It is the first crucial step in its development. The MCU chip incorporates CPU (central processing unit) as well as the memory and necessary peripherals while the MPU chip only has CPU.

Microprocessor And Microcontrollers Notes What are Microprocessor And Microcontrollers? A microprocessor is an IC that has only the CPU inside them i.e. only the processing powers such as Intel's Pentium 1,2,3,4, core 2 duo, i3, i5 etc. These microprocessors don't have RAM, ROM, and other peripheral on the chip.

Microprocessor And Microcontrollers Notes PDF [2021] BTech

The major difference between the processor and the controller is the user has control over the action performed by the device in controller and coding is easier. Thus, this is all about the difference between microprocessor and microcontroller. A microcontroller is cheap in terms of cost than that of a microprocessor.
