The book gives an introduction to the field of communication circuit engineering and electrical network theory, from the standpoint of both currents and small fields. It provides a basic coverage of the theory of transmission of electric energy in lumped constant circuits, on distributed-constant lines, through

EMR associated with power lines is a type of low frequency non-ionizing radiation.

Electric fields are produced by electric charges, and magnetic fields are produced by the flow of electrical current through wires

For the purposes of analysis, an electrical transmission line can be modelled as a two-port network (also called a quadripole), as follows: . In the simplest case, the network is assumed to be linear (i.e. the complex voltage across either port is
