Paleobotany, which is also spelled as palaeobotany, is the branch of botany dealing with the recovery and identification of plant remains from geological contexts, and their use for the biological reconstruction of past environments, and the evolutionary history of plants, with a bearing upon the evolution of life in general. A synonym is paleophytology. It is a component of paleontology and paleobiology. The prefix palaeo- means "ancient, old", and is derived from the Greek ...

Stenbery (1761-1838) is known as the father of Palaeobotany. The most ancient plant fossils were microscopic algae that lived more than one billion years ago during Precambrian times. Macroscopic remains of true vascular plants are first found in the fossil records during the Silurian period of the Paleozoic era.

Abstract. Paleobotany can contribute much to evolutionary scenario-building. Here, we use two case studies — the Devono-Carboniferous vascular plant radiation and the largely coeval evolution of heterosporous from homosporous life histories — to examine the interface between phylogeny and ecology. Our observations challenge some tenets of the ...
