mathematics. No one can learn topology merely by poring over the definitions, theorems, and examples that are worked out in the text.

Section 13: Problem 3 Solution | dbFin

The metric is one that induces the product (box and uniform) topology on X ;

Access Free Solutions Munkres Topology

The metric is one that induces the product topology on \mathbb{R}^n ; As we shall see in §21, if X and Y are metrizable, then there is a sequence of elements of $X \times Y$ converging to (x, y) in the box topology if and only if x converges to x in X and y converges to y in Y . If X is not metrizable, then $X \times Y$ in the box topology is not metrizable. If X is metrizable and Y is not, then $X \times Y$ in the box topology is not metrizable, but there is clearly no sequence of elements of $X \times Y$ converging to (x, y) in the box topology.
