Studies In  
Spermatogenesis  
involves the  
differentiation of  
spermatogonial stem  
cells into  
spermatocytes via  
mitotic cell division and  
the production of  
haploid spermatids  
from the tetraploid  
primary spermatocytes  
via meiotic cell  
division. Spermatids  
subsequently give rise  
to spermatozoa in the  
final phase of  
spermatogenesis,  
called spermiogenesis.

## **Spermatogenesis - PubMed**

The swelling of the posterior ends of the sperm flagella observed in some of the species is also of interest, and in this regard the viviparous clinids offer an excellent subject for comparative studies of sperm length, energetic of propulsion, and survival of the sperm.

there is not a smaller testes size in the hybrid compared with the purebred foxes and, therefore, this is not the determinant of impaired spermatogenesis.

There were smaller diameters of the seminiferous tubules in the hybrids as compared with the purebred foxes, however, and this was associated with the disrupted
