Use these choices: cross-pollination recessive dominant self-fertilization gametes trait inherited 1. Mendel was the first person to succeed in predicting how traits are INHERITED from generation to generation. 2. In peas, both male and female sex cells, which are called GAMETES, are in the same flower. 3.

Ch. 10 Study Guide Answer Key

4.Allowed F1 plants to self-pollinate and called the resulting offspring the second filial generation, or the F 2 Generation. 5.When the F 2 plants grew, Mendel observed that the trait from the P 1 plants which disappeared in the F 1 plants reappeared in a ratio of about 3:1 in the F 2 plants. Chromosomes and Genes A.Each chromosome has a specific number of ____, which are segments of ...

Gregor Mendel Study Guide - Section 3.1 Name Opening ...

Mendel studied plant variation in a monastery garden. He made three key choices about his experiments that played an important role in the develop- ment of his laws of inheritance: control over breeding, use of purebred plants, and observation of “either-or” traits that appeared in only two alternate forms.

6.3 Mendel and Heredity - Weebly

Answer Key Section 3.1 Study Guide 1. first to identify cells and name them 2. observed live cells and observed greater detail 3. concluded that plants are made of cells 4. concluded that animals and, in fact, all living things are made of cells 5. proposed that all cells come from other cells 6.

Biology Chapter 6 Section 3 Study Guide Answers

MAIN IDEA: Mendel laid the groundwork for genetics. 1. What is genetics? 2. Whose early work is the basis for much of our current understanding of genetics? 3. How did Mendel's views on inheritance differ from the

views of many scientists of his time? MAIN IDEA: Mendel's data revealed patterns of inheritance.

Mendel chose pea plants for his experiments because they reproduce quickly, and he could easily control how they mate. The sex organs of a plant are in its flowers, and pea flowers contain both male and female reproductive organs. In nature, the pea flower typically self-pollinates; that is, the plant mates with itself.
