THE PEANUT ALLERGY EPIDEMIC - HOME

Peanut allergy is a type of food allergy to peanuts. It is different from tree nut allergies, with peanuts being legumes and not true nuts. Physical symptoms of allergic reaction can include itchiness, hives, swelling, eczema, sneezing, asthma attack, abdominal pain, drop in blood pressure, diarrhea, and cardiac arrest. Anaphylaxis may occur. Those with a history of asthma are more likely to be ...

Peanut allergy - Wikipedia

And peanut allergies, for example, can be so severe it seems unlikely that doctors simply failed to notice them in the past. In fact, many more people may be living with allergies without realizing. One study of a group of teenagers and adults in Copenhagen, Denmark, found that half the asthmatics in the group were undiagnosed and not receiving ...

The Allergy Epidemic - ScienceDirect

“The Peanut Allergy Epidemic is a masterful piece of medical detective work. Fraser has succeeded in doing what numerous specialists have proven unable to do—she has uncovered the cause of this iatrogenic phenomenon and given us an elegant explanation for why and how peanut allergy/anaphylaxis has emerged as a modern-day epidemic.
