Alternate Visual Studio Solution Structures ¶ One of the most common points of feedback on Sitecore Helix regards its use of Visual Studio Projects to organize and set boundaries between modules. Concerns about this practice include: (Re)build times for large solutions

4.2. Alternate Visual Studio Solution Structures ...

A new solution may be created in many ways in VS.NET. The simplest is to create a new project—by default, Visual Studio .NET will create a new solution with the same name as the project, placing the solution files [] in the same directory as the project. Although this works fine for small projects, it isn't well suited to more complex applications.

Solution structure screams the domain with a folder structure that is built around the domain concepts and processes. Notice that there are no folders named Validators, Exceptions, Factories or so. Clear separation of concerns on the project level. All the code could be in one big project, but I find it helpful to organize code on layer level.

.NET Solution Structure of an Enterprise Application

There was an attempt to define a common solution structure via Project Scaffold. This is more orientated toward F# though, rather than C#. It didn't really take off though and there's little sign of development of the ideas these days.

Code rant: How to structure Visual Studio solutions

After a while of creating the same solution structure code over and over again for the some kinds of projects I decided to make a template. Making a single project template was easy: you just follow along the Visual Studio export template wizard but making a solution template with multiple projects was not as simple, hence the reason for this blog post.
