Yes, electronic water softeners/descalers really work. They create electromagnetic waves in water and increase the solubility of hard components. By that, all the hard components pass throughout the plumbing without creating scale buildup. With time, they also remove the existing scale buildup.

Waves in a pond do not carry the water molecules from place to place; rather the wave's energy travels through the water, leaving the water molecules in place, much like a bug bobbing on top of ripples in water. When a balloon is rubbed against a head of hair, astatic electric charge is created causing their individual hairs to repel one another.

Water is an excellent conductor of electricity. Water has a slightly negative charge because oxygen is slightly more negative than is hydrogen, which is slightly positive. Pure water at its normal temperature is not very effective in extracting electricity from the body. When heated, however, water will speed up conduction of electricity in the body.
